$60/EA
PER MONTH

*Introductory rate $49/camera/month expires 5/31/21

VSaaS SOLUTIONS

Video Surveillance systems are an integral part of a total security solution. Not only can they help prevent theft and keep employees safe, but they can **enhance your contact tracing capabilities**. VSaaS offers these advantages through a hosted, cloud-based solution. By taking your solution to the cloud, you can remove upfront costs and gain anytime/anywhere access to your data.

Easy to manage multiple locations through centralized data storage and access.
On-device storage to back-up data locally, so it's always accessible if there is a disruption with Internet service.

Real-time alerts. Facility managers can access data from any device & determine if action is necessary.

Lots of choices. Customizable to business needs, quick to scale up or down. Users can add cameras, upgrade camera hardware & resolution, storage capacity, and archive time period. Large variety of cameras are supported.

Analytics. (included in the package).

Bandwidth Conscious. Each camera uses integrated, high-grade solid state storage, places video storage on the camera – allowing for local video access without the need for a NVR.

VSaaS
